HACK ON TRACK

PROBLEM STATEMENTS FOR ROUND 1 - PPT ROUND

DOMAIN 1 : CYBERSECURITY

⚡ PS 1 : THE VERIFIED FIX ⚡

⚡ PROBLEM STATEMENT DESCRIPTION

Build an AI-assisted system that tracks down an access flaw in a document portal and fixes it safely: proof first, then the smallest fix, then checks that nothing else broke.

A document portal (a web app where people upload, store and open files) is suspected to have an unauthorised-access flaw: someone may be able to reach documents they shouldn't be allowed to.

Fixing a flaw like this by hand is slow, and a rushed fix can easily break the portal for the people who are supposed to use it.

⚡ SDG MAPPED

SDG 9 – Industry, Innovation and Infrastructure

SDG 16 – Peace, Justice and Strong Institutions

*Only applicable for ppt round

DOMAIN 2 : FINTECH

⚡ PS 2 : ALL YOUR INVESTMENTS, IN ONE PLACE ⚡

⚡ PROBLEM STATEMENT DESCRIPTION

Give everyday investors one clear view of everything they own across brokers and depositories, and help them understand options beyond stocks, like REITs, InvITs and bonds.

Many everyday (retail) investors hold investments through more than one broker, and their holdings sit with different depositories. There is no single place that shows everything together.
Most people also invest only in stocks (equities). Options like REITs, InvITs and bonds exist, but they are poorly understood, so people stay away from them.

⚡ SDG MAPPED

SDG 8 – Decent Work and Economic Growth
SDG 9 – Industry, Innovation and Infrastructure
SDG 10 – Reduced Inequalities

*Only applicable for ppt round

DOMAIN 3: GENAI

⚡ PS 3 : IS THIS FORWARD TRUE ⚡

⚡ PROBLEM STATEMENT DESCRIPTION

Build an AI system that can verify claims from WhatsApp messages, screenshots, voice notes, PDFs, or URLs by checking them against reliable sources. The system should show the supporting evidence, explain the result in simple language, and clearly indicate when a claim is verified, false, outdated, only partly supported, or cannot be confirmed.

Forwarded messages spread fast: health tips, “new government schemes”, breaking news. Checking them is hard, especially when the claim is hidden in a screenshot, a voice note or a long PDF, or when the reader isn’t comfortable in English.

A bare “true” or “false” doesn’t help much either. People need to know what exactly is wrong, and why.

⚡ SDG MAPPED

SDG 4 – Quality Education

SDG 9 – Industry, Innovation and Infrastructure

SDG 16 – Peace, Justice and Strong Institutions

*Only applicable for ppt round

DOMAIN 4 : BLOCKCHAIN

⚡ PS 4 : PAYMENTS THAT EARN ⚡

⚡ PROBLEM STATEMENT DESCRIPTION

Design a payment system where eligible everyday transactions can earn potential returns, while staying transparent, secure, sustainable and simple to use.

In DeFi (decentralised finance) money can earn yield, but only if someone actively manages it and knows what they are doing. Most people don't, so their money just sits idle between payments, earning nothing.

⚡ SDG MAPPED

SDG 8 – Decent Work and Economic Growth
SDG 9 – Industry, Innovation and Infrastructure
SDG 10 – Reduced Inequalities

*Only applicable for ppt round

DOMAIN 5: OPEN INNOVATION

⚡ PS 5 : OPEN INNOVATIONS (SOFTWARE TRACK) ⚡

⚡ PROBLEM STATEMENT DESCRIPTION

The software track: bring your own problem statement instead of ours — but it still has to sit inside one of the four domains.

Open Innovation runs across the four domains on this train: GenAI, FinTech, Cybersecurity and Blockchain. Only those four. If you already know what you want to build and it fits one of them, you do not have to take our problem statement for it.
Anything outside those four domains does not belong on this track.

*only applicable for ppt round
